EDUCATION

Institute of Technical Education and Research

B.Tech in Computer Science and Engineering; CGPA: 9.68 / 10.0

Bhubaneswar, Odisha

8/2024 – 6/2028 (*Expected*)

Mother's Public School

Higher Secondary Education (Class XII); Result: 86%

Bhubaneswar, Odisha

6/2022 – 3/2024

Don Bosco Academy

Secondary Education (Class X); Result: 96%

Patna, Bihar

9/2016 – 6/2022

EXPERIENCE

Core Technical Member

Google Developer Group on Campus (GDGoC) ITER

Nov. 2025 – Ongoing

Bhubaneswar, Odisha

- Developed a Python-based Discord bot utilizing BeautifulSoup for automated web scraping of tech news, delivering daily updates to a community of 100+ members.
- Contributing to technical workshops and collaborating with peers.

Machine Learning Engineer Intern

Elevate Labs

8/2025 – 9/2025

Remote

- Implemented and compared classical ML models including SVMs, KNNs and Logistic Regression for structured data classification tasks.
- Engineered a CNN-based Plant Disease Classifier using **MobileNetV2** transfer learning, optimizing for accuracy across various plant species.
- Built a credit card fraud detection pipeline using **XGBoost**, focusing on feature engineering to handle class imbalance in synthetic Kaggle datasets.

PROJECTS

AI-Based Manim DSA Visualizer | *Python, LangChain, Ollama, Manim, ChromaDB*

1/2026 – Present

- Developing a dual-model agentic pipeline using LangChain where an Architect LLM plans scene decomposition and a Coder LLM generates Manim code to prevent logic drift.
- Implemented a self-healing loop that autonomously identifies and fixes Manim syntax errors via iterative LLM feedback, ensuring high rendering reliability.

Valorant Smurf Detection System | *Python, XGBoost, Scikit-Learn, Pandas*

12/2025 – Present

- Developing a player behavior classification model to identify smurf accounts by analyzing match statistics and movement patterns.
- Applying feature scaling and hyperparameter tuning to XGBoost classifiers to increase detection precision.

Plant Disease Detection App | *TensorFlow, Keras, Streamlit, MobileNetV2*

9/2025

- Deployed a deep learning model via **Streamlit** for real-time leaf disease classification from user-uploaded images.
- Achieved significant reduction in model latency by utilizing pre-trained weights and fine-tuning specific output layers.

TECHNICAL SKILLS

Languages: Python, Java, HTML/CSS

Frameworks & Libraries: Scikit-Learn, TensorFlow, Keras, XGBoost, Pandas, NumPy, LangChain, Django, Streamlit, React

Developer Tools: Git, GitHub, Ollama, Manim, Zed, PyCharm

Concepts: Machine Learning, Agentic AI, Computer Vision, Statistical Analysis
